

CROSS COUNTRY CANADA SUPPLIES & RENTALS MAX WELD CLAMPS

PIPELINE • CONSTRUCTION

Max Weld Clamps, offered exclusively by Cross Country Canada, are the ultimate external lineup clamps for pipeline welding. Engineered for quality and efficiency, these clamps deliver robust access to weld seams without the hassle of rolling or readjusting the clamps.

By allowing more pipe exposure during welding, Max Weld Clamps help minimize weld cracking upon clamp removal—an issue often faced with traditional clamps. The secure, reliable design ensures smoother welds and a streamlined setup, perfect for high-volume applications where every second counts.

Ratchet & Camlock Styles

Choose the style that best fits your setup for greater adaptability.

Full Weld Access

Expose more pipe without rolling, making every weld seamless.

Reduced Weld Cracking

Helps avoid cracking during removal for more reliable outcomes.

Enhanced Welding Security

Designed to reduce weld failures, keeping your project on track.

Precise Alignment Bars

Parallel to hinges for accurate positioning, ensuring a perfect fit every time.

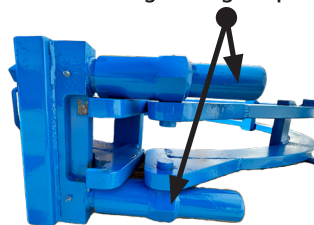

External Jackscrews

Conveniently placed on the outside to boost weld access and torque for superior tightness.

RATCHET STYLE
SIZES 10" - 84"

Jack screws on the outside to allow more weld access and increase tightening torque.

Alignment bars parallel with hinges.

CAMLOCK STYLE
SIZES 3" - 16"
